

PRODUCT BULLETIN

SUBJECT **Synthetic “HogsHair” Air Filter Media**

PB-404

Koch Hogshair Media composed of organic fibers that have been curled and coated with a special resin, then baked together at a high temperature. The result of this process is a tough and springy, thoroughly bonded, nearly rigid air filtration medium.

Excellent alternative to disposable panel filters.

Besides its cut-to-size advantage over disposable panel filters, Koch Hogshair Media is also more durable, easier to handle and install, has very high dust-holding capacity, offers inventory convenience and economy, and it’s washable for repeat use.

Easy to handle and install.

Koch Hogshair Media is lightweight, so you can carry several cut filters or even a roll to the job site. And there are no fiberglass slivers or oil to make handling them uncomfortable. Installation is easier, too. You can bend or twist a Koch Hogshair Media filter to facilitate installation. Once in place, it springs back to its original shape, ready for operation.

Saves Space on HVAC Service Trucks

Standard and most popular sub-standard size filters can be made with a single cut from standard size rolls, which saves space on service trucks compared to conventional disposable air filters.

Technical Data

	1/2"	1"	2"
Initial Resistance (In.W.G) @ 300 FPM	0.05	0.06	0.07
Final Resistance (In. W.G.)	1	1	1
Average Arrestance (%)	63%	64%	67%
Dust Holding Capacity	92 GMS	119 GMS	232 GMS
